

Pipeline Construction & Operation

We have tremendous depth with respect to all phases of pipeline construction and operation. As a firm, we have been deeply involved in these areas for more than 50 years and assist clients involved in the construction and operation of pipelines that move natural gas, oil and refined products to the marketplace.

We assist clients with project financing, rights of way acquisition, EPC contracts and all facets of such projects. In addition, should a project become the focus of regulatory or commercial disagreements, we are knowledgeable litigators who will fight to get revenue flowing again.
